Report compiled by Operational Intelligence & Performance Team Claire Makinson - Performance Manager, 01785 277067 Farhana Patel - Performance Officer, 01785 277798

INTRODUCTION

The purpose of the Early Years District Profile is to bring together a wide range of indicators for each district. It provides the commissioners with a robust evidence base across a range of health and wellbeing issues to help identify priority areas to target and place services in appropriate areas.

The report pulls together information from various sources to present a picture of the health and wellbeing of children aged 0-4, following through the Best Start Pathway.

The data is presented and displayed at Ward Level with comparisons made with Staffordshire and England. Information used in the report is the latest available at the time of writing.

Health and social needs are complex and it is unlikely that there will be a single factor which is responsible for the particular situation in each local area. Therefore, it is important that no single item of information is treated in isolation. Instead the various pieces of data and evidence should be used together to give a better picture of the needs of children and young people in the local community.

We aim to produce this annually with the next one being due November 2016 to support the Districts with their Local Authority annual conversations.

SUMMARY

Staffordshire Moorlands district comprises 27 wards, with 9 Lower Super Output Areas of 0-30% deprivation spread across 6 of the wards. The population of children aged 0-4 has seen a drop in the majority of wards between 2013 and 2015 with 20 wards showing a decrease and 6 wards showing an increase. Overall the population of children aged 0-4 within Staffordshire Moorlands has decreased by 0.2 percentage points from 4,688 to 4,480 between 2013 and 2015; this is in line with the slight reduction shown across Staffordshire.

For families with dependents, Married couples are the largest group in the district accounting for 15.1% of households; the proportion of households that are lone parents varies greatly across the wards from 2.1% in Biddulph Moor to 11.3% in Biddulph East giving an average of 5.2% of all households in Staffordshire Moorlands.

The numbers of children living in out of work benefit claimant households has significantly dropped between 2012 and 2015 with a drop of over 50% of households; this drop is seen in 18 of the 27 wards but 8 wards have seen increases, most significantly in Biddulph East and Leek North.

In terms of the Children's Social Care groups, the largest proportion of Children in Need are within the ward of Biddulph East. Leek North has the greatest proportion of Children subject of a Child Protection Plan and these are spread across 10 wards within the district, whereas only 7 wards have children who are Looked After.

The Early Years reach across Staffordshire Moorlands has shown an improvement of nearly 10 percentage points between 2014/15 and 2015/16 equating to nearly 500 additional children aged 0-4. Two wards showed a decline in the reach, Dane and Werrington with decreases of 17.3 and 5.9 percentage points respectively. All other wards showed an improvement with the greatest increase being made in Cheadle North East with a 23.5 percentage point increase. Leek North also saw a large increase of 20.3 percentage points to give the highest reach figure across all districts. Of the 6 wards with areas of 0-30% deprivation, 4 showed an increase in the reach population giving Staffordshire Moorlands a reach figure of 59.9%, a 8.3 percentage point increase from 2014/15.

Attendance at children's centre activities in Staffordshire Moorlands shows that the majority of attendees are from the local areas surrounding centres or community venues. Attendees are also seen to be travelling from other districts, primarily Newcastle and also from Stoke on Trent.

SUMMARY CONT'D

The general fertility rates across Staffordshire Moorlands are statistically lower than England at 53.8 per 1,000 compared to 63.2 for England and 57.8 for Staffordshire. 12 out of 27 wards have levels lower than England with the remaining wards having levels similar to England. 7.2% of babies are born at low birth weight in the district which is statistically similar to the England average with the percentages ranging from 3.9% in Cheddleton to 18.5% in Bagnall & Stanley. The prevalence of breastfeeding as a whole has declined in the district, of the wards where data is available, 11 wards showed a decline and 4 wards showed an improvement.

Data as at Summer 2016 shows the take up of Think2 childcare places is 81% in Staffordshire Moorlands. In terms of sufficiency for Think2 places there is a vacancy rate of 26%, this is comparable with the vacancy rates for all 2 year olds at 23%.

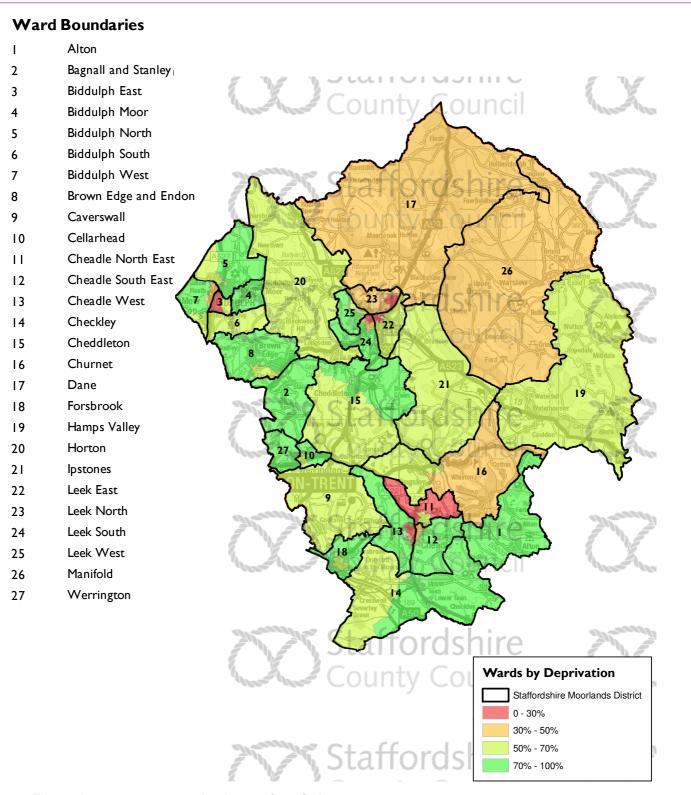

Children in Reception class with excess weight is higher in Staffordshire Moorlands than both the Staffordshire and England average; this is the case in 8 wards and is reflective of the fact that 12 wards have shown an increase in the proportion of children with excess weight at this age. Children of the same age who are classed as obese shows a slight improvement with the rate being similar to that of Staffordshire at 9.6%.

The proportion of children in Staffordshire Moorlands with a Good Level of Development at the Early Years Foundation Stage is similar to that of the Staffordshire average at 73.2%. The GLD rate varies from 33.3% in Manifold to 100% in Alton, although care should be taken due to the small numbers of children included in the cohort. Overall girls perform better than boys but this is not the case in 5 wards where boys outperform girls, namely Biddulph Moor, Biddulph North, Biddulph South, Horton and Manifold.
